Overall Project

- I am working with Ricochet and will be doing simulations of the neutron background being received in the detector.

This week (4/25)

- My goal is to install the ChoozSimulation code into the new directory and build it

- I am also trying to get the testCfneutrons.mac to run in our new directory.

Last week (4/18)

- My goal has been to install ChoozSimulation code into the new Ricochet directory and try and build it.

- And also to make sure everything was working from last week, there was a typo in the MATERIALS.ratdb we were using.

Week of 4/11

- My goal has been to transfer the old spectrum and the needed materials and elements files over to the new rat folder where we will be doing the simulations from now on, because it has the newer versions of the software installed.
