➤ LUX analysis: Previously worked on extending the bad area cut using Kr-83m data *(left)* which has a ~41.6 keV energy signal. Now, I'm using C-14 *(right)* to push to even higher energies (β^- with Q=156 keV). Currently checking out the populations present in C-14 plot.

➤ LZ Phase II: Organizing what type of work we can accomplish before holiday shut-down.

➤ LZ grids: Planning work to test cleaning methods on grid wires using electropolished test grids. This involves using water and CO_2 spray washes in a cleanroom.
