# System Test Analysis Workshop

- 2 weeks ago, we had a System Test Analysis workshop to develop tools to analyze the data from Phase I, Phase II, and gas test.
- Worked on script to query the Ignition database for the sensor readings from any desired sensor (pressure, temperature, measured voltage, etc.)
- Issue with ROOT <-> Python interface with resulting segmentation violations . . . working through them.

*(above) Example of Ignition data read in with python script.*

# Phase II
