Platform Roadmap

Summary

Questions

Team's background was in Hadoop, Spark, Mesos and other 'Big Data' Technologies that came out of the valley

Worked with highly regulated industries like Healthcare and Finance trying to help leverage their data to answer hard questions

Was not satisfied with the restrictions that available technologies were placing along with lack of hybrid cloud support.

Lack of a truly End to End AI/ML platform was also a concern.

SAFE AI was usually non-existent or an after-thought

Security, Assurance, Fairness and Effectiveness (SAFE)

MOTIVATIONS

Do not re-invent the wheel

Learn from the mistakes of others.

Newer does not always mean better

Measure twice and cut once

DESIGN GUIDELINES

Security should not be an afterthought

Provide freedom of choice

PLATFORM ABSTRACTIONS

PLATFORM ARCHITECTURE

to your computer.

The problem seems to be caused by the following file: SPCMDCON.SYS

PAGE_FAULT_IN_NONPAGED_AREA

If this is the first time you've seen this Stop error screen, restart your computer. If this screen appears again, follow these steps:

Check to make sure any new hardware or software is properly installed. If this is a new installation, ask your hardware or software manufacturer for any windows updates you might need.

If problems continue **DEMO** ble or remove any newly installed hardware or software. Disable **DEMO** memory options such as caching or shadowing. If you need to use Safe Mode to remove or disable components, restart your computer, press F8 to select Advanced Startup Options, and then select Safe Mode.

Technical information:

*** STOP: 0x00000050 (0xFD3094C2,0x00000001,0xFBFE7617,0x00000000)

YYY CREMPEON EVE Address EREFZELZ base at EREFEODO - Ratestame 2deddeZe

PLATFORM ROADMAP

End to End ML Features – (Models, Apps)

SAFE AI Feature set

Cloud bursting Support (condor-annex looks very promising)

Grid Universe support

Open Source Core platform (Apache 2.0) Looking for potential contributors/users

SUMMARY

Building a Data Science/AI/ML Platform is never fun

Open source tools like Pegasus, HTCondor make it a lot easier

Still a challenge to pick the right set of technologies

Still very use-case dependent

Get ready to do a lot of Devops (and then some more)

K8s has a lot of cool tools to help bundle complex platforms (helm charts etc)

Since all of these tools keep evolving, you are never done !
