

## Summer 2019

- The MiniCLEAN group did not have much for me to do this summer. As of July there was an update to the triplet lifetime paper and a summary of the ML PE counting, but nothing since.
- Took classes over the summer

## Future

- Lay the groundwork for my thesis (next spring through fall 2020)
- Hope to do work regarding coherent neutrino scattering (?) or
- Continue work for Ricochet with Vedant.
- Balance this with the work for the PLC (should be easily doable)
