

Feasibility Study of Measuring the Higgs Self-coupling Using the Muon Collider

Kenny Jia

Dec 10th, 2021

- Signal: $\mu^- + \mu^+ \rightarrow \nu_\mu + \bar{\nu}_\mu + H + H$ ($0.0008182 \pm 6.2e - 7$ pb)
- Background:
 - $\mu^- + \mu^+ \rightarrow \nu_\mu + \bar{\nu}_\mu + b + \bar{b} + Z$ (0.03183 ± 0.000025 pb)
 - $\mu^- + \mu^+ \rightarrow \nu_\mu + \bar{\nu}_\mu + b + \bar{b} + H$ ($0.003771 \pm 3.1e - 6$ pb)
 - $\mu^- + \mu^+ \rightarrow \nu_\mu + \bar{\nu}_\mu + b + \bar{b} + b + \bar{b}$ ($0.0009237 \pm 7.2e - 7$ pb)

100k for each

MVA to discriminate $v\bar{v}HH$ with dominant bkg $v\bar{v}bbZ$

- With TMVA, a built-in package in ROOT
 - Support different ML approach:
 - Boosting Decision Tree
 - Multilayer perceptron
 - Deep Neural Network

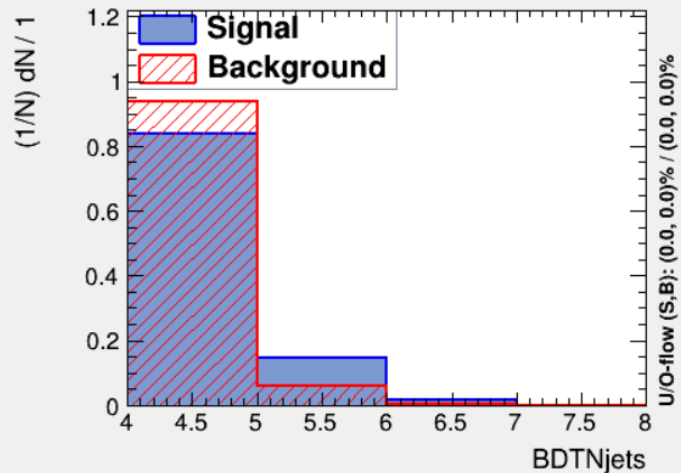

- Require only two tight b-tag rather than four
- Adding all angle variables
- Still writing the code for two tight b-tag with two loose b-tag and the angle between two higgs
