# **HTCondor Clients in 2013**

**Command Line Clients** 

Fully Featured!

Requires fork/exec and process handling

Outputs in multiple formats

Something Missing In The Middle SOAP Clients

Features! (Some)

Caveats with respect to scalability, security.

# **Design Philosophy**

**ClassAds**: Everything based on ClassAds; make these the "core" of the bindings.

**Pythonic**: Semantics and APIs should feel natural to a Python programmer.

- Use iterators, exceptions, guards.
- ClassAds behave as much like a dict as reasonable.

Backward compatible: APIs are here to stay for as long as possible.

- When we absolutely must, use standard Python DeprecationWarning techniques.
- Yes, this means that we keep even design warts for far longer than we'd like!

Native code: Call same HTCondor library code as CLI; identical in performance.

**Complete**: If you can do it with the command line tools, you should be able to do it with Python.

# **Pythonic!**

Since *pythonic* is in our design philosophy, the education tools should use the tools favored by the Python community:

- <u>Sphinx</u>-based documentation. Hosted on ReadTheDocs; looks / feels / smells like Python documentation.
- <u>Jupyter</u>-based tutorials. Use Binder.org service to spawn a Docker container with a private HTCondor instance (or use Docker locally). Interact via your browser.

## You can help!

The contents of the tutorials and documentation are kept on GitHub:

- <u>https://github.com/htcondor/htcondor-python-bindings-tutorials</u>
- > JupyterLab & Binder integration developed by Josh Karpel.
- > Find a bug? Spot some missing content?
  - Send a pull request; Travis-CI will test and update the static content once merged.

# **Installing Python Bindings**

#### > On Linux

- Included in the RPM and DEB packages for the system Python(s)
- Available via PyPI on Linux:
  - pip install htcondor
- Available via Anaconda (via conda-forge channel) on Linux and macOS:
  - conda install -c conda-forge python-htcondor
- > On Windows
  - Included in the Windows MSI
    - 9.0.x LTS Releases and 9.8.1- Feature Releases: Python 2.7 and Python 3.6
    - 9.9.0+ Feature Releases: Python 3.9
- > On MacOS
  - Included in the HTCondor tarball for the system Python
  - Available via Anaconda, see above

# **Python API – Big Changes**

- > No major changes since last year
- > Upcoming deprecations
  - User-controllable Schedd transactions with schedd.transaction() as txn: ... not deprecated yet but will be soon (HTCondor 10.1?), check the release notes and docs closely!
  - Use schedd.submit(my\_submit\_obj) now!
- Keep track of changes in the <u>release notes</u>
