

# HTCondor ~~Architecture~~ Vocabulary

Christina Koch

HTCondor Week @ Throughput Computing 2023

July 12, 2023

**CHTC**

**HTCondor**  
Software Suite

**PATh**

# Did you know the manual has a glossary?

<https://htcondor.readthedocs.io/en/latest/codes-other-values/glossary.html>

# Job

## What is a job?

“Atomic unit of work”

One executable (script, binary)

Like  $y = f(x)$ , transforms inputs into outputs

How does HTCondor describe jobs?

# ClassAd

## What is a ClassAd?

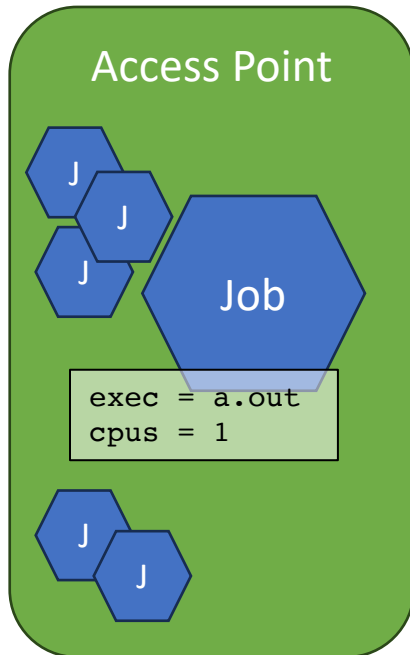

“Key-value pairs”

Metadata for a job (or other HTCondor object)

Values can be Booleans, numbers, strings, or expressions

Can add custom keys/values

# Access Point (AP)

## What is an Access Point (AP)?

“machine where users place jobs to be run”

The home for jobs

Often where users log in

# Execution Point (EP)

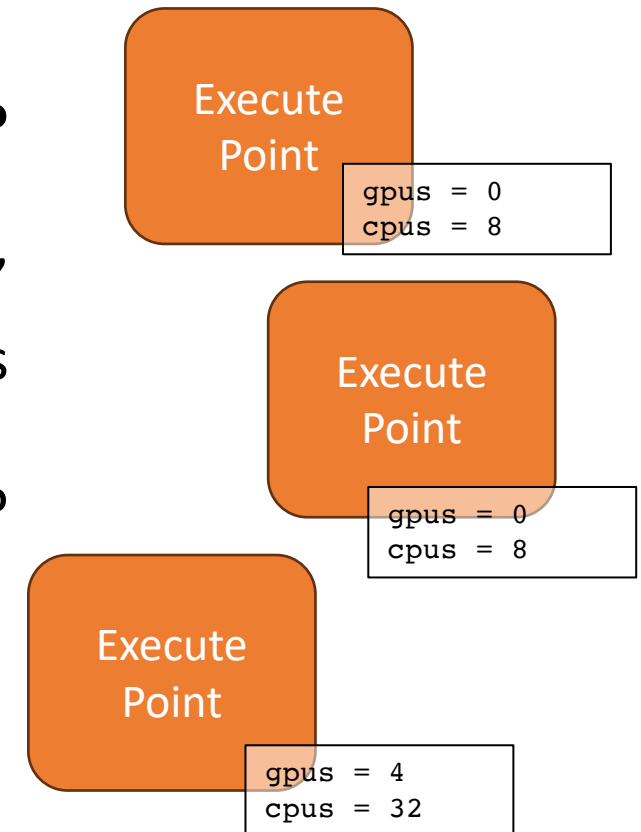

**What is an Execution Point (EP)?**

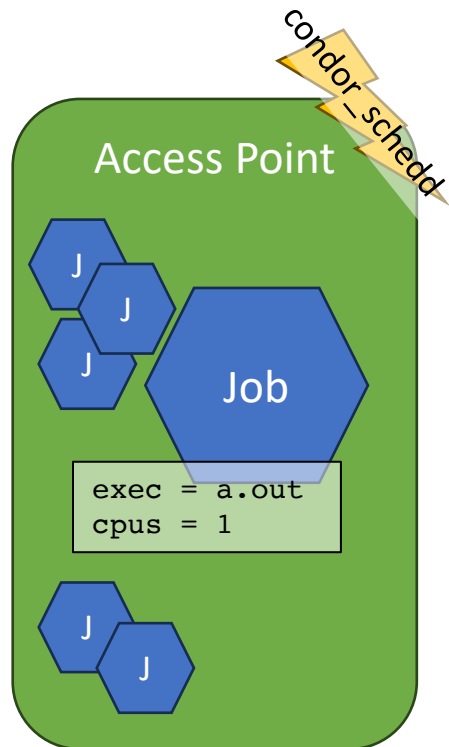

“where jobs run”

ALSO described using ClassAds

...how do the APs and EPs talk to each other?

# Daemons

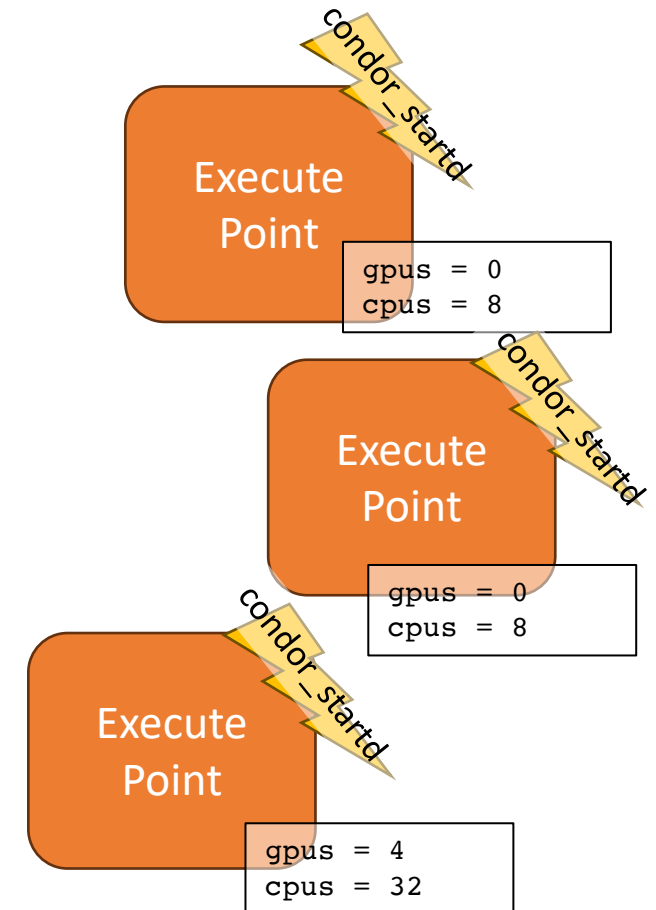

## First...What are Daemons?

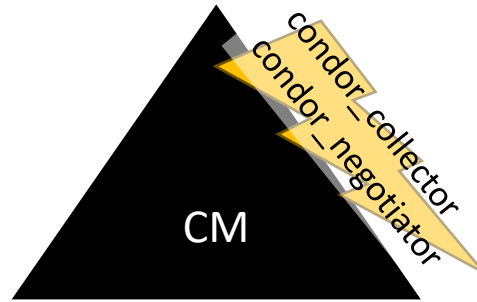

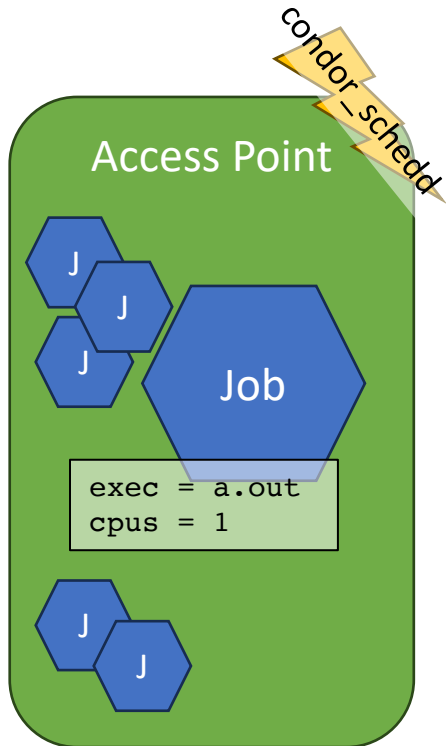

“A long-running process; an older term for ‘service.’”

HTCondor entities (AP, EP, etc.) are associated with a particular daemon

Now, “how do APs and EPs find each other?”

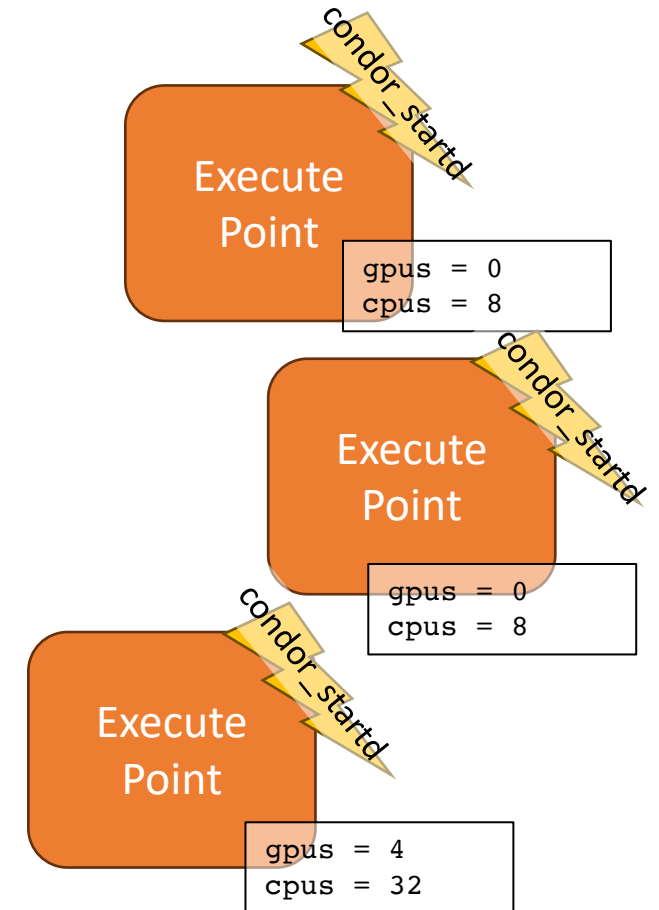

# Central Manager (CM)

## What is the Central Manager?

“machine with central database of all the services, an accountant and negotiator”

It is responsible for “matching” jobs on the AP with execute points

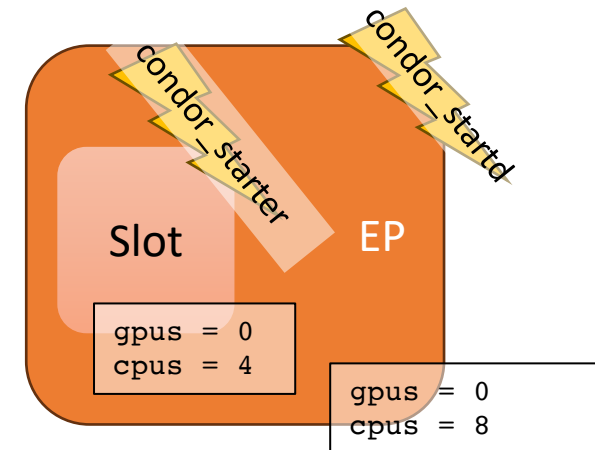

# Slot

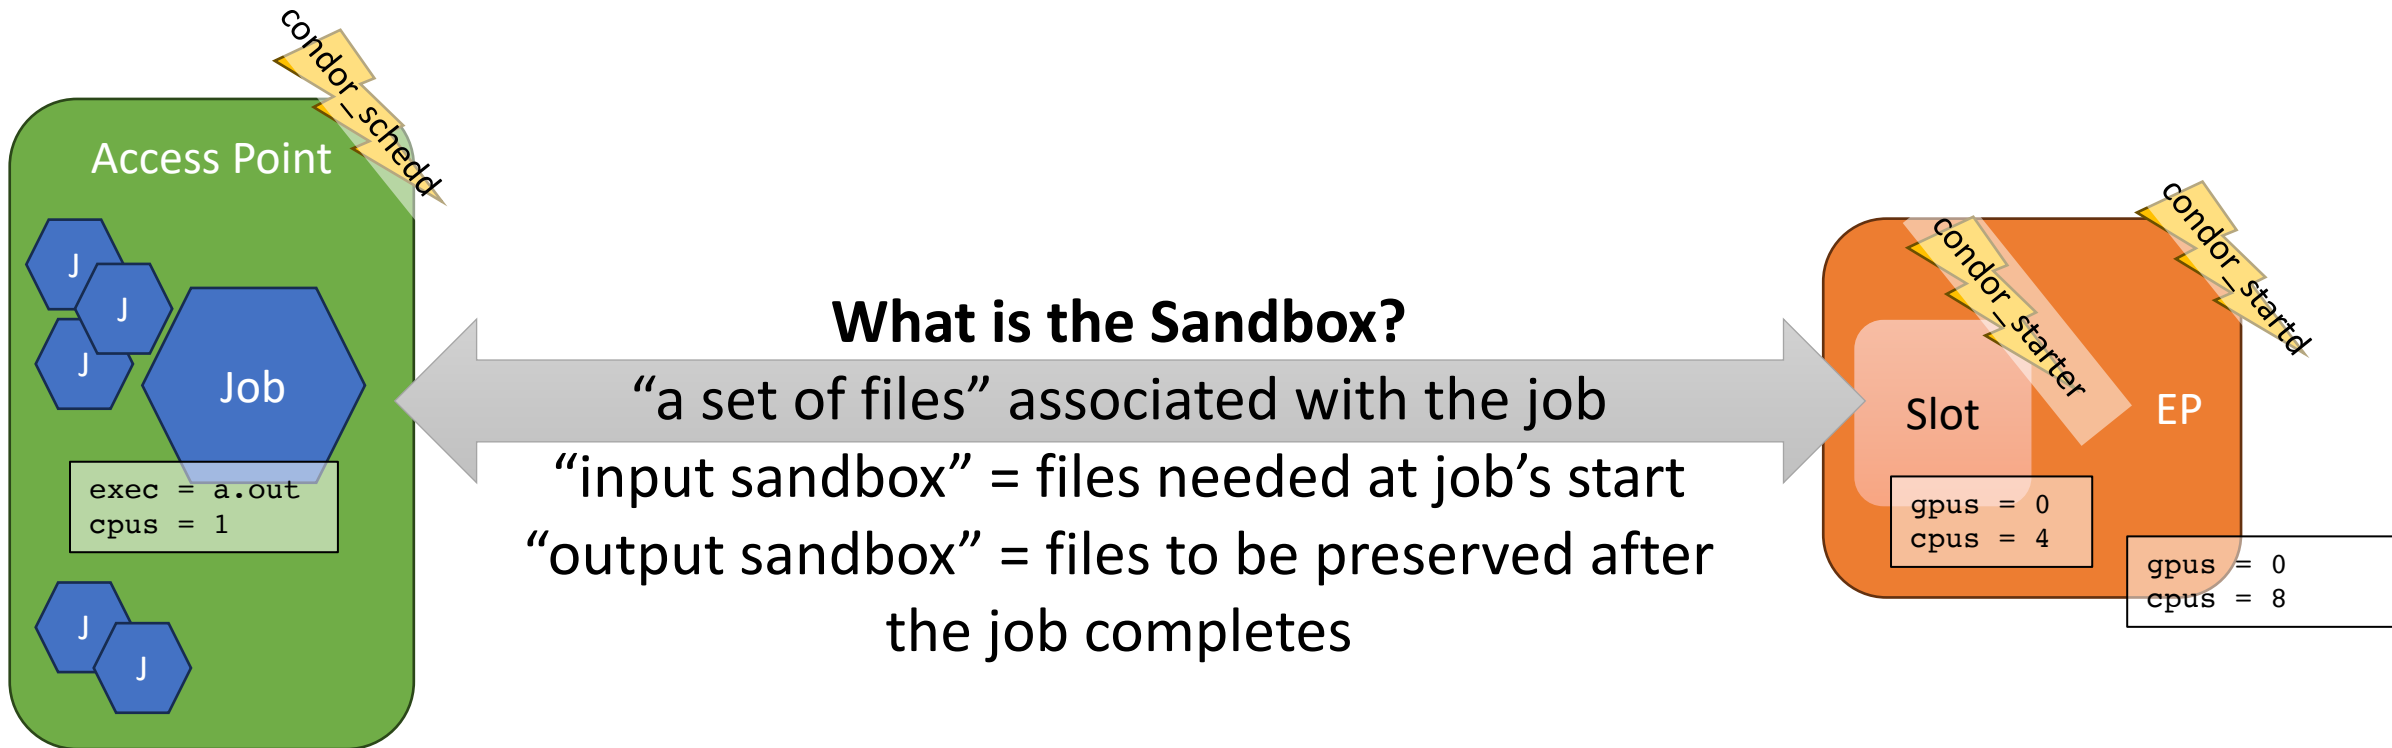

## What is a Slot?

“the location on the EP where the job runs”  
Think of it as a “slice” (or sometimes the entirety!) of a server/machine.

Created by the *condor\_starter* daemon
