

Thoughts on WBS 2.3

Wenjing Wu
AGLT2

- More sharing of our experiences as site administrators
 - The Daily Ops meeting is a great opportunity for us to talk about site operation issues
 - Maybe we could extend the discussions to each site to include
 - Facility management, some site manages their own power, cooling, PDU, cabling, switches etc. What we can learn from each other good/bad experiences.
 - System administration, what tools/systems we use for monitoring, alerting, automation of operations?
 - What extra work we do to improve the performance of the site.
 - How do we measure the performance of our site
 - Any improvements we foresee necessary, and can be of common interest and put together common effort to work on
 - Easy sharing of site document, configurations, debugging experience.
