Detect Nearly Degenerate Gauginos at LHC

Kai Wang

Phenomenology Institute Department of Physics University of Wisconsin

PHENO 07

In Collaboration with G.F. Giudice, Tao Han and Liantao Wang

Nearly Degenerate: Theoretical Motivation

Nearly Degenerated Gauginos

$$\Delta = m_{\chi_1^{\pm}} - m_{\chi_1^0}; \qquad (m_{\chi_2^0}, (m_{\chi_3^0}) \sim m_{\chi_1^{\pm}})$$

Already studied: Wino LSP in AMSB Chen, Drees and Gunion, 1996; Feng et al.1999 $M_2 < M_1, \ \Delta \sim m_\pi$

$$\Gamma_{\chi_1^\pm} \sim 10^{-22} {
m ~GeV}$$

signature: Charge track

Cases Studied: well-tempered neutralino Arkani-Hamed, Delgado, Giudice, 2006

- Bino-Wino LSP $M_1 \simeq M_2$, $\Delta \sim \mathcal{O}(\text{GeV})$
- Bino-Higgsino LSP $M_1 \simeq \mu$, $\Delta \sim \mathcal{O}(\text{GeV})$

$$\Gamma_{\chi_1^\pm} \sim 10^{-9}~{
m GeV}$$

Nearly Degenerate: Phenomenology Challenge

• lepton p_T : too soft below acceptance ($p_T > 10 \text{ GeV}$)

・ロト ・ 一下・ ・ 日 ・ ・ 日

• triggering a ISR jet and $\not\!\!{E_T}$?

MonoJet + $\chi\chi$

SCONSIN

Large QCD background with similar kinematic feature.

- jZ with $Z \rightarrow \text{invisible}$
- *jW* leptonic decay but soft leptons (*W* decay also τ three body decay.)

・ロト ・回ト ・ヨト ・ヨト

More Jets: Gluino Pair

Possible Signature

- DY Gaugino pairs with ISR
- Gauginos decay from squark pair (not dicuss here, decoupled squarks)
- Gauginos decay from gluino pair

To have more kinematic handle Gaugino pairs from WBF

- QCD background is big but under control
- EW very similar kinematics except $\not E_T$

For signal DY with ISR two jets, not included in presentation now, to be included

(日)

Table: Summary Table for Tagging soft muon Channels

Production Rate of Gaugino pairs from WBF

Summary

(日) (同) (日) (日)

Searching Channels

- DY Gaugino pairs with ISR: *large QCD background for most region*
- Gauginos decay from gluino pair: very promising but model dependent
- Gauginos decay from squark pair (not dicuss here, decoupled squarks)
- Gaugino pairs from WBF: Hard but still possible

Conclusion

By triggering on large missing E_T plus forward/backward jets tagging, one may be able to detect nearly degenerate gauginos scenario. (cannot distinguish from Invisible Higgs from WBF) Adding Soft muons will help the search.
