Outline

- Introduction
- The radion in RS1
- radion with matter in bulk
- Higgs-radion mixing
- Conclusions

Introduction

- Warped Extra Dimensions: One compact extra dimension with warped geometry.
- Original setup: Two branes as boundaries and all SM fields on the TeV Brane $\rightarrow$ RS1.
  - Towers of KK gravitons
  - Radion graviscalar
- More recent setups: Two branes, Higgs field on TeV brane, SM fields in the "bulk".
  - Towers of KK gravitons
  - Towers of KK SM fields
  - Radion graviscalar

- Radion couplings are higgs-like (except to gluons and photons)
- Radion might be the lightest new particle in warped scenarios
- When SM matter in the bulk, KK modes are constrained to be at ~ 3 TeV. The radion could be the only accessible mode from these models.
- Radion can in principle mix with the Higgs

The Radion and its interactions

In the RS1 model [$Randall, Sundrum, ('98)$] the background metric g^o_{AB} is defined by

$$ds^2 = e^{-2\sigma}\eta_{\mu\nu}\, dx^\mu dx^\nu + dy^2$$

with $\sigma(y) = ky$ and such that a hierarchy is created between the two boundaries at $y = 0$ and $y = \pi r_0$ is created.

The linear metric perturbations $h_{AB}(x, y)$ can be reduced to

$$ds^2 = \left(e^{-2\sigma}\eta_{\mu\nu} + \left[e^{-2\sigma}h^{TT}_{\mu\nu}(x, y) - \eta_{\mu\nu}r(x)\right]\right) dx^\mu dx^\nu + \left(1 + 2e^{2\sigma}r(x)\right) dy^2$$

(the graviscalar $r(x)$ is massless. A stabilization mechanism providing it with mass is assumed for example[$Golberger, Wise('99)$])

INTERACTIONS

Matter-gravity interactions come from the matter action

$$S_{mat} = \int dx^5 \sqrt{-g}\, \mathcal{L}_{mat}$$

We expand this action in powers of the radion perturbation

$$S_{mat}(r^0) = \int dx^5 \, \sqrt{-g^{(0)}} \mathcal{L}_{mat}$$

$$S_{int}(r) = -\frac{1}{2} \int dx^5 \sqrt{-g^{(0)}} e^{2\sigma} \left(-T^{\mu}_{\mu} + 2T_{55}\right) r(x)$$ [Rizzo(02),Csaki,Hubisz,Lee(07)]

But the radion $r(x)$ is NOT canonically normalized (canonical kinetic term).

The canonically normalized radion is $\phi_r(x) \frac{2}{\Lambda_r} = e^{2k\pi r_0} r(x)$

where $\Lambda_r = \sqrt{6} M_{Pl} e^{-k\pi r_0}$

RS1 - Matter on the brane

Single radion interaction becomes

$$S_{int}(r) = \frac{1}{\Lambda_r} \int dx^4 T^{\mu}_{\mu} \, \phi_0(x) \qquad \Rightarrow \text{Higgs} - \text{likecouplings!}$$

gluons $$-\frac{\alpha_s}{8\pi} \left[\sum_i F_{1/2}(\tau_i)/2 - b_3 \right] \frac{\phi_0}{\Lambda_r} \, G_{\mu\nu} G^{\mu\nu}$$

photons $$-\frac{\alpha}{8\pi} \left[\sum_i e_i^2 N_c^i F_i(\tau_i) - (b_2 + b_Y) \right] \frac{\phi_0}{\Lambda_r} \, F_{\mu\nu} F^{\mu\nu}$$

massive bosons $$\frac{\phi_0}{\Lambda_r} M_V^2 V^{\alpha} V_{\alpha}$$

fermions $$\frac{\phi_0}{\Lambda_r} m_f \bar{f} f$$

The Radion and Matter in the bulk [Csaki,Hubisz,Lee(07)]

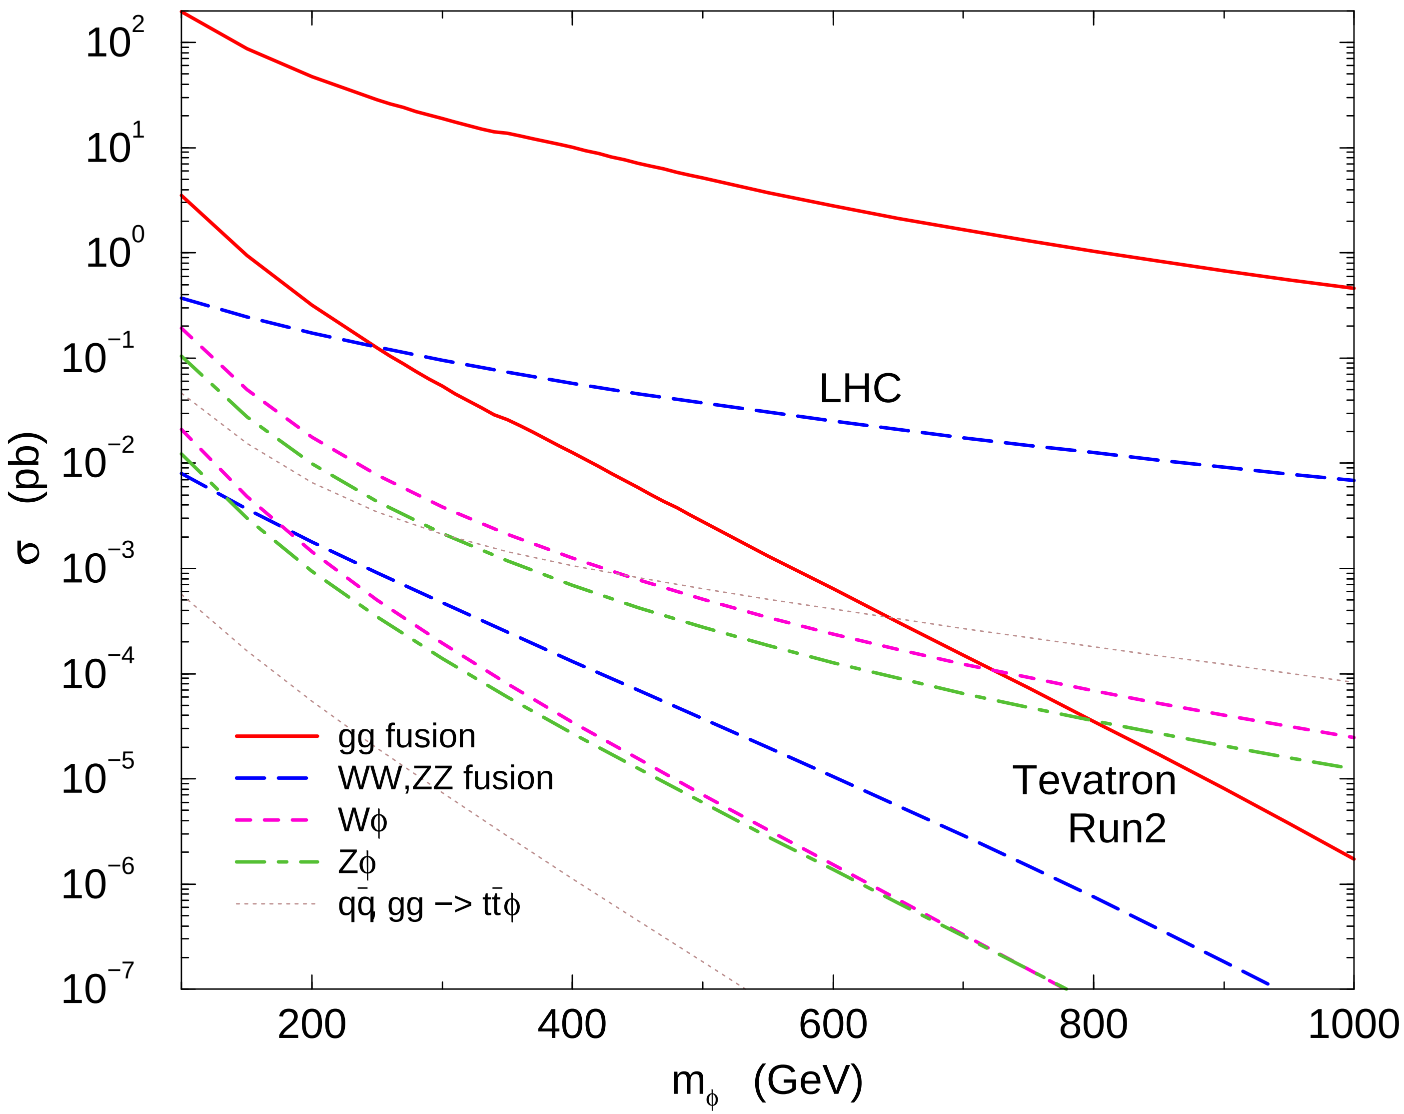
With gauge fields and fermions in the bulk (but Higgs on the TeV brane) we need the new interactions with the radion.

$$S_{int}(r) \;=\; -\frac{1}{2}\int dx^5\sqrt{-g^{(0)}}e^{2\sigma}\left(-T^{\mu}_{\;\mu}+2T_{55}\right) r(x)$$

- For Massless gauge fields:
  - The T_{55} term $\Rightarrow$ tree level coupling r-glu-glu and r-γ-γ.
  - Brane localized kinetic terms for gauge fields.
  - Trace anomaly effect
  - Loop contributions (tops and W's)

$$\left[\frac{1-4\pi\alpha(\tau^0_{UV}+\tau^0_{IR})}{4k\pi r_0}+\frac{\alpha}{8\pi}\left(b-\sum_i\kappa_i F_i(\tau_i)\right)\right]\frac{\phi}{\Lambda_r}F_{\mu\nu}F^{\mu\nu}$$

- Radion interaction with Massive Gauge bosons maintains its main contribution from the boson mass
- Interaction with fermions, although model dependent remains proportional to the mass of the fermion with an $\mathcal{O}(1)$ coefficient
- Interaction with the higgs is computed as in RS1 since Higgs localized



(from K.Cheung ('00))

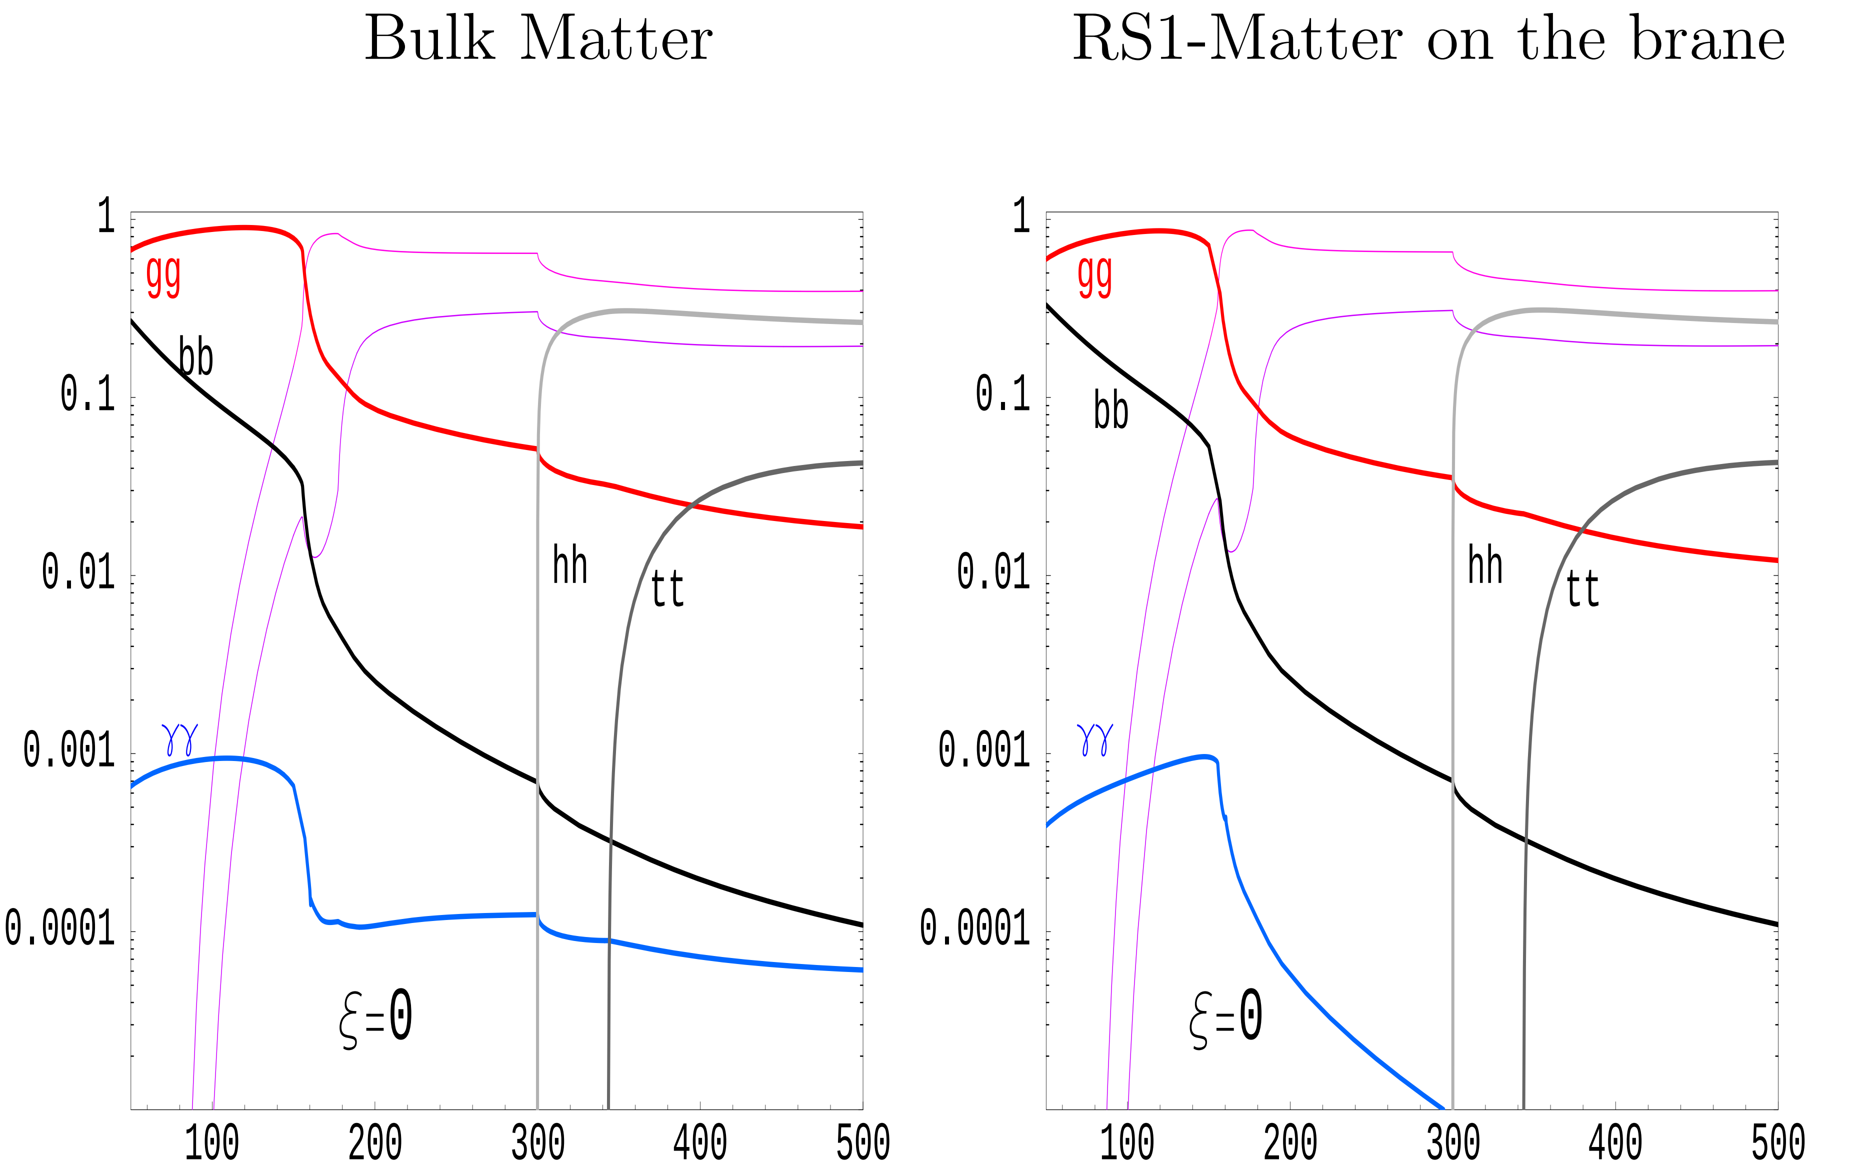


Figure 1: Branchings of the radion vs. its mass M_ϕ

Higgs-radion mixing

[Giudice,Rattazzi,Wells(00), Csaki,Graesser,Kribs(00), Han,Kribs,McElrath(01), Rizzo,Hewett(02), Dominici,Gunion,Grzadkowski,MT(02)], Gunion,MT,Wells(03)]...

We now consider the brane operator:

$$S_\xi = \xi \int d^4x \sqrt{g_{ind}} R(g_{ind})\ H_0^\dagger H_0 \,.$$

$$\begin{aligned}\mathcal{L}_{scalar} &= -\frac{1}{2}\left\{1 + 6\xi\left(\frac{v_0}{\Lambda_r}\right)^2\right\}\phi_0\Box\phi_0 - \frac{1}{2}\phi_0 m_{\phi_0}^2\phi_0 \\ &\quad -\frac{1}{2}h_0(\Box + m_{h_0}^2)h_0 - \frac{6\xi v}{\Lambda_r}\ h_0\Box\phi_0\end{aligned}$$

Radion mass added "by hand".

NORMALIZED HIGGS AND RADION PHYSICAL FIELDS

$$h_0 \;=\; \left(\cos\theta - \frac{6\xi\gamma}{Z}\sin\theta\right) h + \left(\sin\theta + \frac{6\xi\gamma}{Z}\cos\theta\right)\phi \;\equiv\; d\,h + c\,\phi$$

$$\phi_0 \;=\; \left(-\cos\theta\,\frac{1}{Z}\right)\,\phi \;+\; \left(\sin\theta\,\frac{1}{Z}\right)\,h \qquad \equiv\; a\,\phi + b\,h$$

with $\gamma = \frac{v}{\Lambda}$ and Z and θ depend on m_ϕ, m_h, Λ and ξ.

$\Rightarrow$ 4 parameters in Higgs-radion sector: m_ϕ, m_h, Λ and ξ

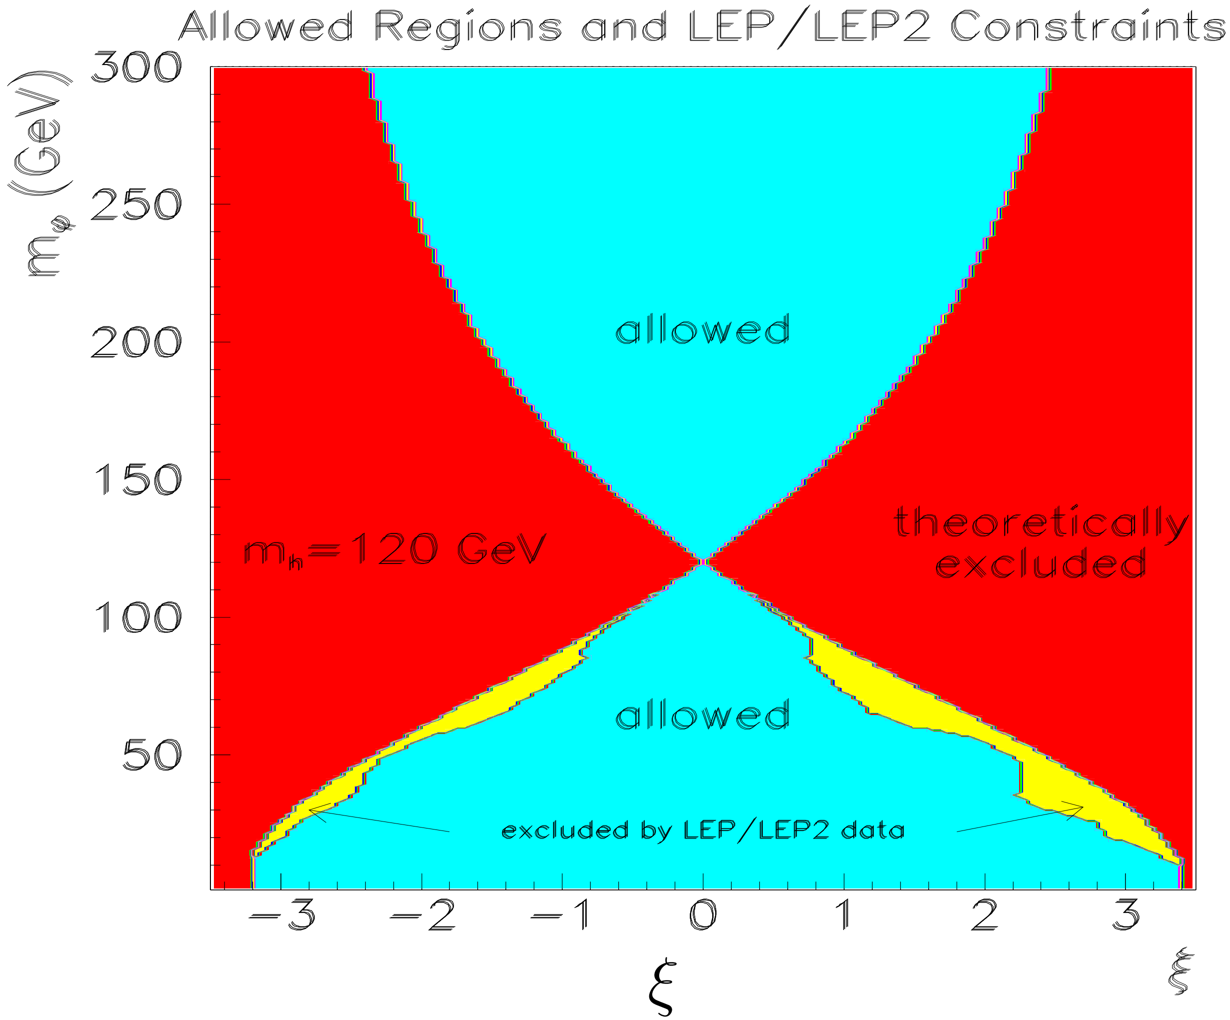

Figure 2: Allowed m_ϕ and ξ for $m_h = 120$GeV and $\Lambda = 5$TeV

(from Dominici,Gunion,Grzadkowski,M.T. ('02))

VV and ff COUPLINGS

$$g_{ZZh} = \frac{g\,M_z}{c_W}(d + \gamma b) \qquad g_{ZZ\phi} = \frac{g\,M_z}{c_W}(c + \gamma a)$$

$$g_{f\bar{f}h} = -\frac{g\,m_f}{2\,M_w}(d + \gamma b) \qquad g_{f\bar{f}\phi} = -\frac{g\,m_f}{2\,M_w}(c + \gamma a)$$

Very interesting property of the ξ-mixing: the different couplings of the physical radion to matter photons, gluons, fermions and massive bosons can vanish at different points in parameter space.

$\Rightarrow$ ϕ can be photon-fobic, gluon-fobic or massive-fobic

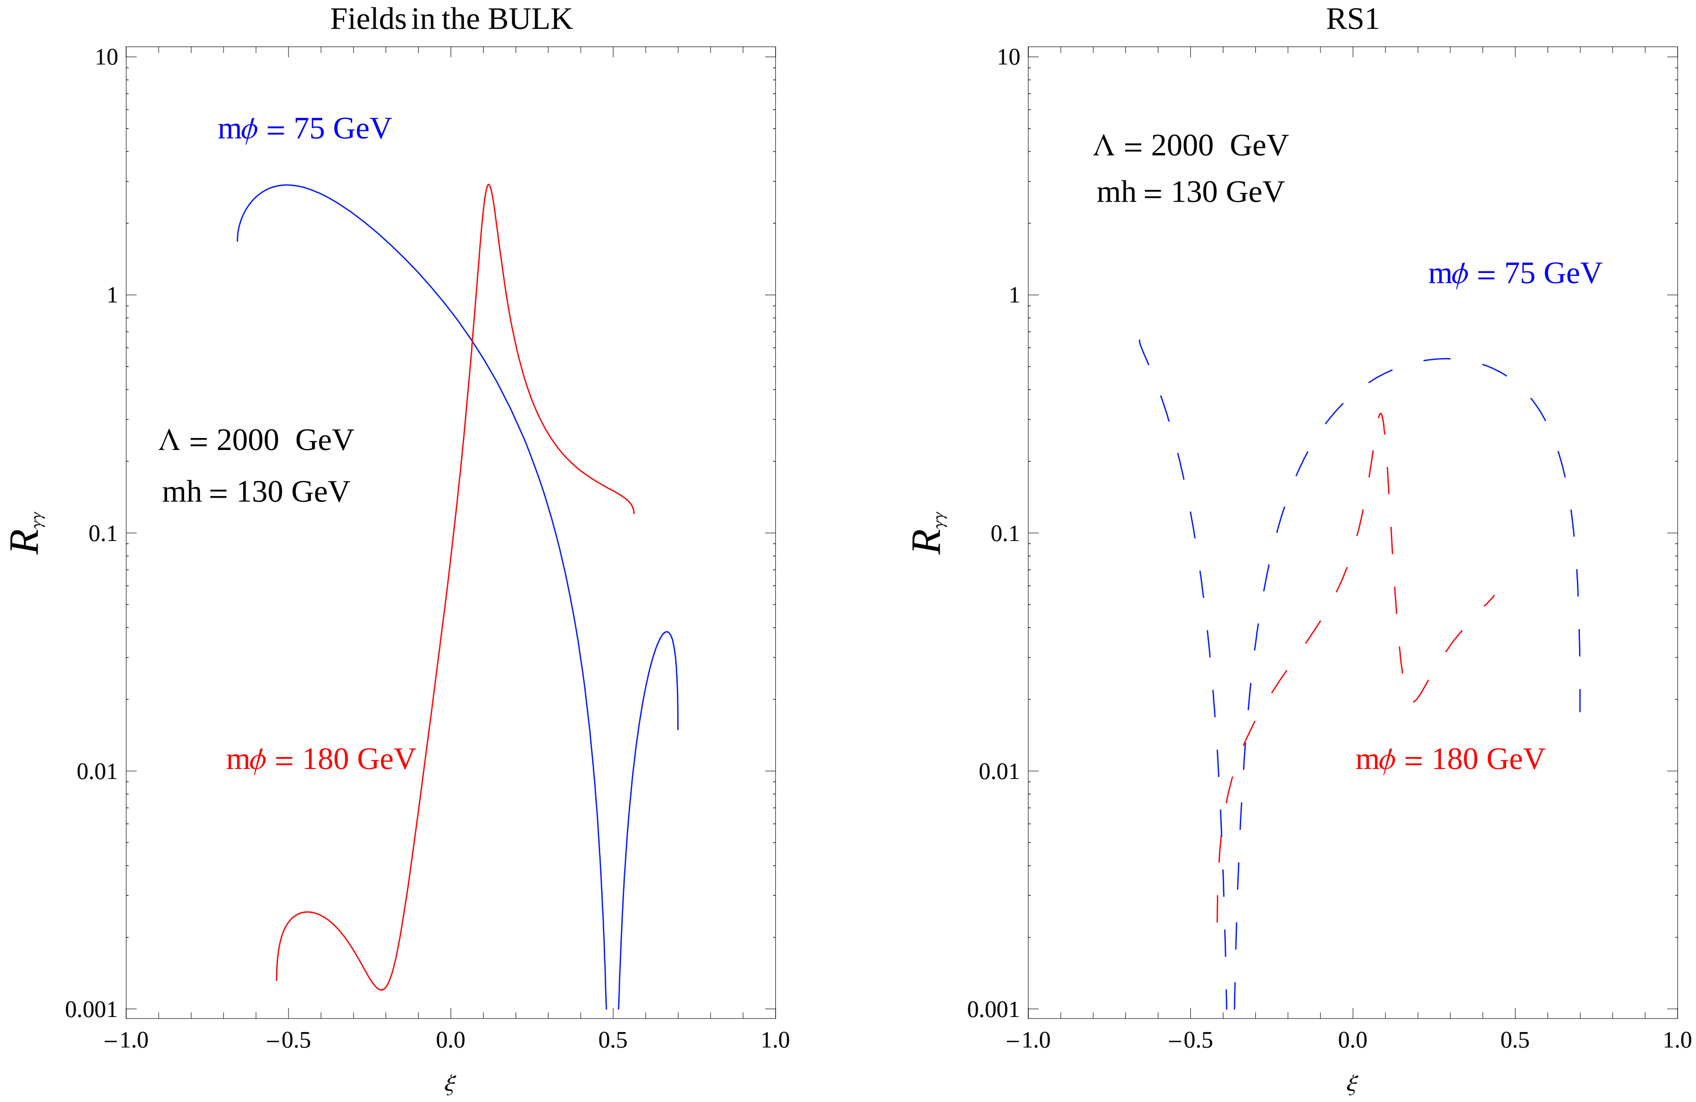

Figure 6: Ratio $R_{\gamma\gamma}$ of production rates $gg \rightarrow r \rightarrow \gamma\gamma$ over $gg \rightarrow h_{SM} \rightarrow \gamma\gamma \quad (with \;\; m_{h_{SM}} = 130 \; GeV)$.

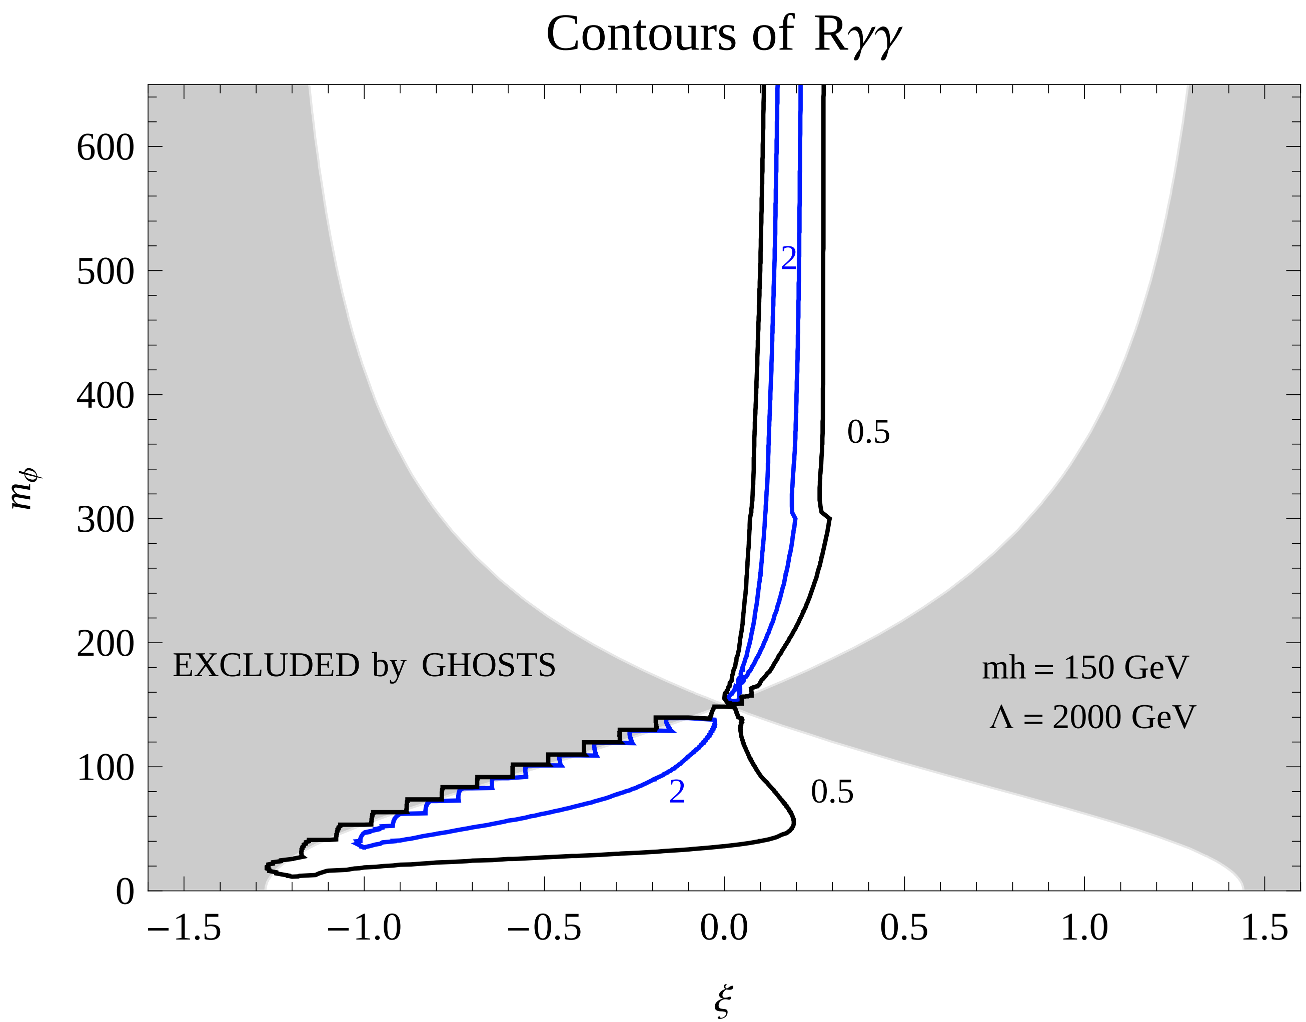

Figure 7: Contours of the Ratio $R_{\gamma\gamma}$ of the rates $gg \rightarrow r \rightarrow \gamma\gamma$ over $gg \rightarrow h_{SM} \rightarrow \gamma\gamma$ $(with\ \ m_{h_{SM}} = 130GeV)$.

Conclusions

- Radion phenomenology is generically very similar to the Higgs search
- RS1 radion is simple and well studied
- Higgs-radion mixing adds interesting properties to both the radion (fobic couplings) and the Higgs (suppressed/enhanced couplings)
- Bulk matter has interesting and unexpected effects in radion pheno, in conjuction with some radion-higgs mixing (preliminary-work in progress).
